

The **Bushing (BU)** valve is a check valve with a standard bushing housing. The valve is adaptable to many types of service applications. It has very little restriction and produces a low pressure drop. It can be used quite effectively in systems where flow and pressure drop are critical by the use of a reducer coupling. The Bushing valve also makes an excellent **vacuum breaker.** The high flow rate insures maximum effectiveness for vacuum breaker service. By reversing the direction of flow it can also be used as a low-pressure **relief valve**.

The bushing thread sizes are designated by two sets of numbers; the first being the male thread, the second the female thread.

See page 48 for Flow Formulae Valve weights are approximate.

HOW TO ORDER CHECK-ALL STYLE BU

1000

Listed above are the most common material selections. Please contact the factory for additional options.

500 PSI is the only standard cracking pressure for spring materials other than Stainless Steel. Cracking pressure tolerance is +/- 15%. .125 PSI springs are not recommended for installations with flow vertical down.
Seat materials other than metal-to-metal have a maximum pressure rating of 1500 PSI. PTFE seats are not

resilient. See page 49 for allowable leakage rates.
